

Readiness assessment

Before you go · Complete remotely before travel; revise on site in week one

Score the gap between what the system will assume and what the hospital actually is. Higher total = higher risk. Feeds B-2.

Hospital	Unit / area	Completed by	Date

1. Design–reality gap — score each dimension 0 (no gap) to 10 (total gap)

After Heeks' design–reality gap model. Rate the distance between what the proposed system assumes and what you find.

Dimension	What you are rating	Score 0–10	Evidence / note
Information	What the system expects recorded vs. what is written down today		
Technology	Power, network, hardware assumed vs. installed and working		
Processes	The workflow the software implies vs. the real patient journey (D-3)		
Objectives & values	What the deploying team wants vs. what the hospital wants		
Staffing & skills	Digital literacy assumed vs. present on the ward		
Management systems	Governance and accountability assumed vs. actual		
Other resources	Money and time assumed vs. committed		
TOTAL			

2. The four questions that decide survival

Code	Question	Answer	Detail (name, figure, source)
PAID-IT	Is there a paid IT person at the hospital?	Yes / No	
OWNER-5Y	Is there a funded owner for the system for the next five years?	Yes / No	
PRESENCE	How many years is the organisation committed to this site?		
HANDOVER	Will a handover pack (L-1) exist on departure?	Yes / No	

3. Result

Thresholds are not yet calibrated (v0.3). Use the score to structure the conversation, then complete B-2.

Summary judgement and who you discussed it with:
