

Debrief and feedback return

Once you are back · Started on site; closed within two weeks of return

What goes back into the handbook. Started in the field, closed within two weeks. Under two hours. Attach to the CCD closure report.

Hospital	Unit / area	Completed by	Date

0. What we inherited

The handbook exists because each cohort has started from zero. This section is how that stops being a claim about the past and becomes something measured every year. Answer it even if — especially if — the answer is 'nothing'.

Question	Answer	Detail
Was there a handover pack (L-1) from a previous team?	Yes / No / Partial	
Did you find completed instruments from a previous deployment?	Yes / No — which?	
Were they usable — could you act on them without re-doing the work?	Yes / No / Partly	
Was there a named person at the hospital who could explain what existed?	Yes / No	
Did a six- or twelve-month check (S-1) exist for the previous deployment?	Yes / No	

What was missing that cost you time — be specific, and estimate the days it cost:

What you had to rediscover that someone already knew:

1. Version and completion

Handbook version followed	Trip dates	Site	Team

2. Instruments — completed, skipped, and why

A skipped instrument is a finding about the handbook, not a failure of the team. Say so plainly.

Instrument	Completed?	If skipped or partial — why?
B-1		
B-2		
B-3		
D-1		
D-2		
D-3		
D-4		
L-1		

S-1	Scheduled? Y / N	Named owner and dates, from L-1 section 4 — this is the only outcome measurement the deployment will ever produce
-----	------------------	---

2b. Where you departed from the handbook, and why

Different from section 3. A departure can be entirely correct and still needs recording — the next team's first question about any configuration is 'why is it set up this way?', and an unanswered why gets redesigned from scratch.

What the handbook says	What we did instead	Why	Would you do it again?

3. Where the handbook was wrong on site

Page or instrument, what it said, what was actually true:

4. What you had to invent because it was not covered

5. Outcome scores at departure (from D-4)

Adoption	Fidelity	Penetration	Sustainability (fill at 6 / 12 months)

6. The three questions you wish you had asked while still there

7. Who can answer questions about this deployment in a year

A student email address expires. Give a route that will still work when the next team reads this.

Name	Role then	Contact route with a real lifespan	Until when

The one thing the next team should do first:
