

Field data capture — paper sheet

While you are there · Every unit, before leaving each building

Paper fallback for the KoBoToolbox form. One sheet per unit. Photograph every form in use — one blank, one completed — before you leave the building.

Hospital	Unit / area	Completed by	Date

Prefer the KoBoToolbox form (D1_Data_Capture_KoBo.xlsx) on a phone: it attaches photos directly and works offline. Use this sheet if no phone is available.

1. Paper forms in use in this unit

Form name (as printed)	Blank photo taken?	Completed photo taken?	Who fills it	Who receives it, by when	Per day / month

2. Volume — counted, not estimated

Measure	Count	How counted (register / observed / asked)	Date
Patients seen per day			
Inpatients today			
Lab tests per day			
Deliveries per month			
Other:			

3. How is the patient identified at this point?

Identifier used (folder ID? name? other?), where it is written, whether this unit issues its own numbers:

4. Power and network in this room

Item	Reading / answer
Working socket in the room? How many? Which circuit?	
Grid voltage measured (V) — and time of reading	
Grid hours per day (observed)	

Working network link IN THIS ROOM? (yes / no / intermittent)	
Latency measured from here with the real application (ms)	

5. Room photograph taken? (outlets, cable routes, where a workstation could go)

☐ Yes — file name(s):

Notes — anything the next team could not learn from Barcelona:
