

Handover pack — cover sheet

Before you leave · Started on Wednesday of week two; complete before the last day

What physically stays at the hospital. Started mid-second-week, walked through with the named owner in person before departure.

Hospital	Unit / area	Completed by	Date

1. Named owner

Name	Role	Contact	Walked through the pack on (date)

2. Contents — tick when present and handed over

- ☐ Runbook per deployed unit — daily task, screenshots, written for zero prior IT; tested on someone not in the training
- ☐ 'What to do when it breaks' sheet — the five most likely failures and the first thing to try; includes 'the system takes 3–12 minutes to start'
- ☐ Credentials handed over securely — in person, separately, recorded for rotation — NEVER written in this pack
- ☐ Support escalation ladder — tier 0 in-product help · tier 1 hospital IT staff and super-users · tier 2 our organisation, remotely · tier 3 contracted implementer, if funded
- ☐ Encryption key and credentials held by the hospital's owner — not by a departing volunteer; without the key the backups cannot be restored
- ☐ Downtime procedure written, emergency forms stocked in every unit, rehearsed — at least 8 hours of forms per unit; who declares downtime; how paper is entered afterwards
- ☐ Battery replacement date — from the room temperature; who budgets it
- ☐ Backup demonstrated by the owner while we watched — backup AND restore
- ☐ Cutover plan, if paper is retired after departure — date, who announces it, what happens on the day
- ☐ Who checks it at 6 and 12 months — name and date
- ☐ What we deliberately did NOT do, and why — the most useful page in the pack
- ☐ The handbook version we followed — v0.5

3. Support ladder

Tier	What	Name	Route (phone / email / where)
0	Self-help in the product	—	
1	Hospital IT staff and super-users		
2	Our organisation, remotely (VPN)		
3	Contracted implementer (SLA), if funded		

4. Six- and twelve-month check

Check	Who	Date planned	Done? Result
6 months			
12 months			

What we did not do, and why:
